MFC-8890DW.....219 Entering Text.....225 Page 11 Page 12 1 1 1 Overview 1 Your Brother machine can be shared on a 10/100 Mb wired or IEEE 802.11b/802.11g wireless Ethernet network using the internal network print server. The print server supports various functions and methods of connection depending on the operating system you are running on a network supporting TCP/IP. These functions include printing, scanning, PC Fax send, PC Fax receive, Remote Setup and Status Monitor. The following chart shows what network features and connections are supported by each operating system. Page 13 Introduction 2 1 Network features 1 Your Brother machine has the following basic network features. Network printing 1 The print server provides printing services for Windows ® 2000/XP, Windows Vista ® and Windows Server ® 2003/2008 supporting the TCP/IP protocols and Macintosh (Mac OS X 10.3.9 or greater) supporting TCP/IP. Network scanning 1 You can scan documents over the network to your computer (See Network Scanning in the Software User's Guide). Network PC Fax (Not available for DCP-8080DN and DCP-8085DN) 1 You can directly send a file from your computer as a PC Fax over your network (See Brother PC-FAX Software for Windows ® and Sending a Fax for Macintosh in the Software User's Guide for a complete description). Windows ® users can also PC Fax receive (See PC-FAX receiving in the Software User's Guide). Fax to Server (For MFC-8690DW, MFC-8880DN and MFC-8890DW) 1 The Fax to Server feature allows the machine to scan documents and send them via a separate fax server. Unlike Internet fax or I-Fax, the Fax to Server feature utilizes a server to send the documents as fax data over phone or T-1 lines. Page 14 ® computer on your LAN. BRAdmin Professional 3 can also log activity of brother devices on your network and export the log data in an HTML, CSV, TXT or SQL format. For users who want to monitor locally connected printers, install the Print Auditor Client software on the client PC. This utility allows you to monitor printers that are connected to a client PC via the USB or parallel interface from BRAdmin Professional 3. For more information and to download the software, visit us at: Web BRAdmin (Windows ® ) 1 Web BRAdmin is a utility for managing network connected Brother devices. This utility can search for Brother products on your network, view the status and configure the network settings. Unlike BRAdmin Professional 3, which is designed for Windows ® only, Web BRAdmin is a server based utility that can be accessed from any client PC with a web browser that supports JRE (Java Runtime Environment). By installing the Web BRAdmin server utility on a computer running IIS 1, administrators can connect to the Web BRAdmin server using a web browser, which then communicates with the device itself. For more information and to download the software, visit us at: 1 Internet Information Server 4.0 or Internet Information Services 5.0/5.1/6.0/7.0 BRPrint Auditor (Windows ® ) 1 The BRPrint Auditor software brings the monitoring power of Brother network management tools to locally connected machines. This utility allows a client computer to collect usage and status information from a MFC or DCP connected via the parallel or USB interface. The BRPrint Auditor can then pass this information to another computer on the network running BRAdmin Professional 3 or Web BRAdmin 1.45 or greater. This allows the administrator to check items such as page counts, toner and drum status and the firmware version. In addition to reporting to Brother network management applications this utility can E-mail the usage and status information directly to a predefined E-mail address in a CSV or XML file format (SMTP Mail support required). The BRPrint Auditor utility also supports E-mail notification for reporting warning and error conditions. Web Based Management (web browser) 1 The Web Based Management allows you to monitor Brother printer's status or change some of its configuration settings using a web browser. Note We recommend Microsoft ® Internet Explorer ® 6.0 (or greater) or Firefox 1.0 (or greater) for Windows ® and Safari 1.3 (or greater) for Macintosh. Please also make sure that JavaScript and Cookies are always enabled in whichever browser you use. If a different web browser is used, make sure it is compatible with HTTP 1.0 and HTTP 1.1.
